

Diode Module

DF75LA/LB80/160

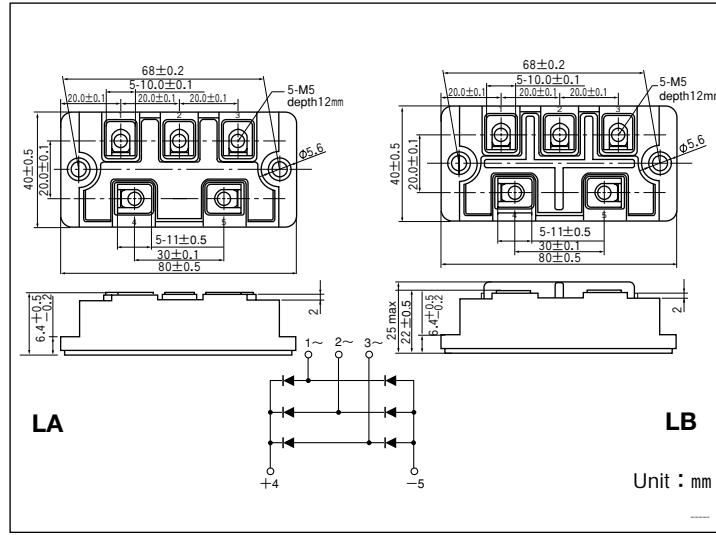

『Features』

Power Diode Module DF75LA/LB is designed for three phase full wave rectification, which has six diodes connected in a three phase bridge configuration. The mounting base of the module is electrically isolated from semiconductor elements for simple heatsink construction. Output DC current is 75Amp ($T_c=101^\circ\text{C}$) Repetitive peak reverse voltage is up to 1600V.

- $T_{j\text{Max}}=150^\circ\text{C}$
- Isolated mounting base

『Applications』

- AC, DC Motor Drive / AVR / Switching-for three phase rectification
